

Klok

HR · PAYROLL · COMPLIANCE

AI does the work. The human just validates.

Upload a document. Klok reads it, drafts the record, and flags anything it is unsure about. You glance, correct if needed, confirm.

Nothing is written without that confirmation.

What Klok is

An HR, payroll and compliance platform for Indian businesses, built by BeyondBoxAI.

Most HR software is built around forms. Someone reads a document, then types what it says into fields.

Klok inverts that. The machine reads and drafts; the person checks and confirms.

WHO IT IS FOR

● Manufacturing

Shift rosters, multi-state workplaces, and a workforce that does not sit at desks.

● Growing companies

Past the point where attendance in WhatsApp costs more in disputes than software would.

● Multi-entity groups

Separate registrations, separate payroll runs, separate filings — one platform.

● Modular by design

Switch on what you run. What is off is not billed and not reachable.

We would rather tell you what is not built than have you find out after signing.

HOW IT WORKS

The screen that replaces typing

The document on the left, the drafted record on the right, and a confirm button.

1

Capture

Upload from a phone, a scanner, or a bulk drop of a hundred files.

2

AI drafts

Klok fills what it can and flags what it is unsure about.

3

You confirm

A human checks. Only then is anything written.

WHERE IT SHOWS UP

● Onboarding

Bulk-drop a joiner's documents. The employee confirms their own; HR verifies.

● Expenses

A photographed receipt becomes a claim line, already filled in.

● Recruitment

Resumes read into structured records, so search works on fields.

● Klokee, the agent

"I need Friday off" — it checks policy and balance, drafts, and waits.

The rule that makes it safe:

Klokee can draft, but it cannot approve and it cannot write.

Modules

A module that is off is not billed, not shown, and not reachable.

● Core HR

One record per person, with dated assignment history.

● Onboarding & exit

Invite to activation; then clearance and full-and-final.

● Time & attendance

Punches, shifts, overtime, regularisation, registers.

● Leave & absence

Policies by grade and location, fiscal-year balances.

● Payroll & compliance

Runs, arrears, PF/ESI/PT/LWF/TDS, payslips, returns.

● Expenses & travel

Receipts read on upload. Approve, then settle.

● Recruitment & ATS

Requisition to signed offer, with resume search.

● Sales CRM

Leads scored; a pipeline that demands a closing reason.

● Dashboard & analytics

The HR registers people actually ask for.

● Klokee, the AI agent

Drafts leave, punch fixes, expenses and loans.

On the roadmap, not built yet:

Training & learning, and performance management.

The statutory work, done properly

Computed on every run, from the same data that produced the payslip.

● Provident fund

Pension cap, EDLI and admin charges — and the ECR file for filing.

● ESI

Eligibility tested at the contribution-period boundary, not monthly.

● Professional tax & LWF

By the state the employee works in, not where you are registered.

● Income tax

Form 24Q, Form 16, 12BB and 12BA — regime-aware from day one.

● Gratuity & bonus

From the joining date and last drawn salary, working shown.

● Registers

Muster roll and wage register, generated rather than rebuilt.

Why this is the hard part

Most payroll errors are not arithmetic — they are a rule applied at the wrong moment. ESI stopped on the increment date instead of at the period boundary. Professional tax on the head-office slab. Klok holds those rules where they belong, so correct is the default.

WHY KLOK

Four things that are hard to copy

1

AI that cannot act alone

No configuration lets the model write directly. The guarantee is in the code.

2

An audit trail you cannot edit

Every change and every export recorded, append-only, platform-wide.

3

Entities that stay separate

Registrations sit at the legal entity and are dated by financial year.

4

Pay for what you run

A module that is off returns a 403. Hiding a menu item is not access control.

Your data stays yours — ask for an export at any time.

PRICING

Per employee, per month

Priced on the people you actually run payroll for. No per-module licence maths.

Starter

Core HR, attendance, leave and payroll.

₹29

per employee / month

Complete

Everything built: adds expenses, recruitment, CRM, analytics and Klokee.

₹59

per employee / month

Enterprise

Multiple entities, custom statutory setups, migration and an agreed SLA.

Talk to us

WHAT THAT INCLUDES

● Billing starts at 25

Said here, not discovered on the first invoice.

● 14-day free trial

No card, and no sales call before you try it.

● Every user included

No per-seat charge on top of the employee count.

● Statutory updates

Rate revisions and new formats arrive with the product.

START HERE

See it on your own data, not on a slide.

Load real employees, run one real payroll cycle, and check the numbers against what you produce today.

Two-minute HR health check
